Fcc Nozzle Technology Design Characterization

Although most of modern FCC units have the feed nozzles installed through riser shrouds at a fixed angle, a new feed nozzle design, shown in Fig. 1, enables an FCC unit to adjust the feed injection angle while using the existing riser shrouds.

Recent advances in FCC technology - ScienceDirect

One relatively inexpensive option that may be particularly attractive is an innovation in fluidised catalytic cracking (FCC) feed nozzle technology, previously thought to be a mature technology. Recent developments here provide the opportunity to increase slurry oil conversion through better atomisation and to, therefore, reduce this heavy, high-sulphur stream, which traditionally goes to the marine fuel oil pool.

The design of a new 76 mm (3 inch) nozzle of the Interaction Heating Facility arc jet at NASA Ames Research Center is described. The computational e orts which were an in-tegral part of the preliminary design and characterization of the nozzle are described as well. Details of heat ux measurements made in this new nozzle are provided. Apart from

Design and characterization of a new nozzle in a NASA arc-jet

The process itself is basically simple: a slurry containing the ingredients of the cracking catalysts is atomized through either a spray nozzle or a fluted wheel rotating at 6000 t rpm into a heated chamber, where the aqueous medium is rapidly evaporated. A porous microsphere of thoroughly mixed catalyst ingredients is left after evaporation.

The test model consisted of three clustered cell nozzle modules or a nonclustered two-dimensional nozzle with an exit Mach number of 3.5, followed by a straight section and a contoured spike. The model was exposed to an external flow of Mach 2.0 to simulate off-design transonic flight conditions.

It uses the classic Method of Characteristics (MOC) technique to design a jet nozzle and analyze the internal flow field, the plume, and the external flow near the nozzle exit. It can then determine the interactions between these three flow fields. We are making it available for beta testing among the nozzle team members.
